

Hess Remote Access - MAC

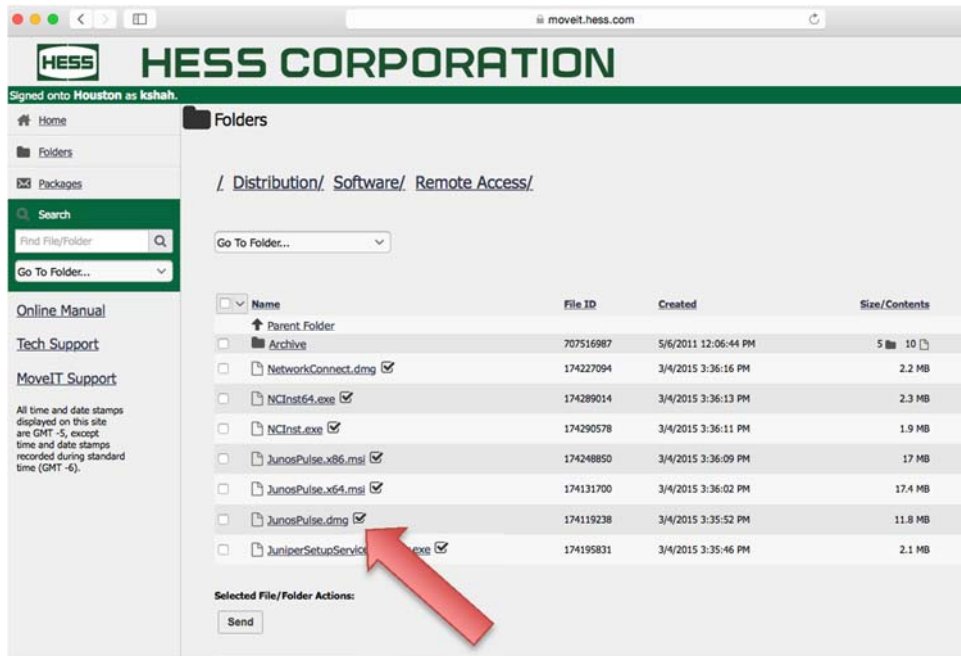

1. Download the Junos Pulse VPN Client. Navigate to <http://moveit.hess.com> and login using your Hess Credentials.

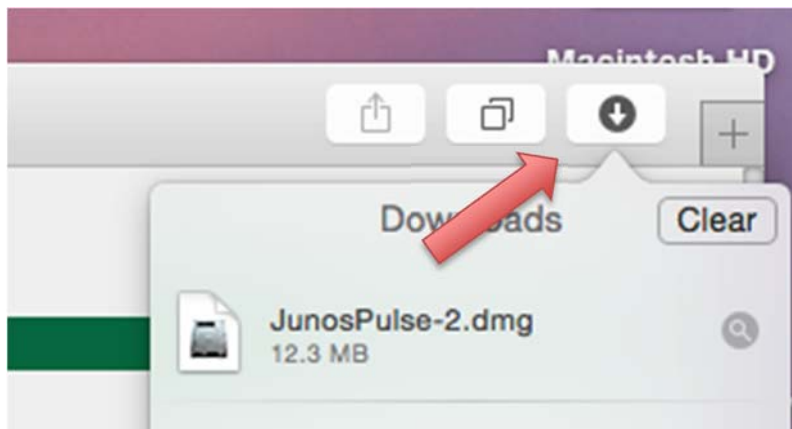

2. Click on Folders on the left pane. Next, navigate to Distribution → Software → Remote Access.

3. Click on JunosPulse.dmg to download the VPN client.

4. The downloaded file will appear in the top right corner of your browser window. Double click on JunosPulse.dmg.

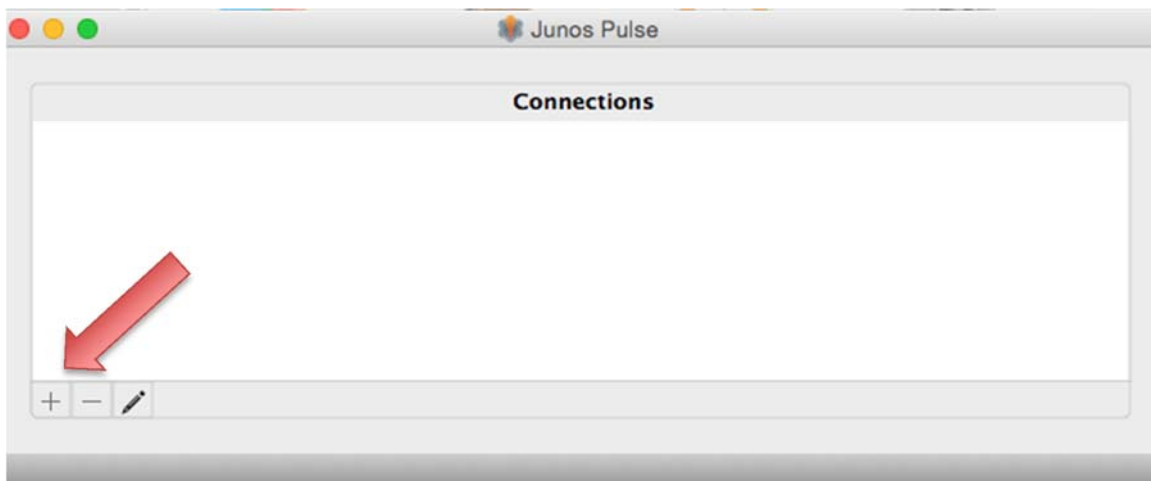

5. Next double click on the JunosPulse.pkg icon to run the setup. Follow the steps to install the VPN Software.

6. Once installed, find the icon by going into Finder → Applications → Junos Pulse. You can drag this icon to your desktop and/or dock to make it easier to launch when needed.

7. Opening Junos Pulse will show no connections. Click on the + sign at the bottom left corner of the application.

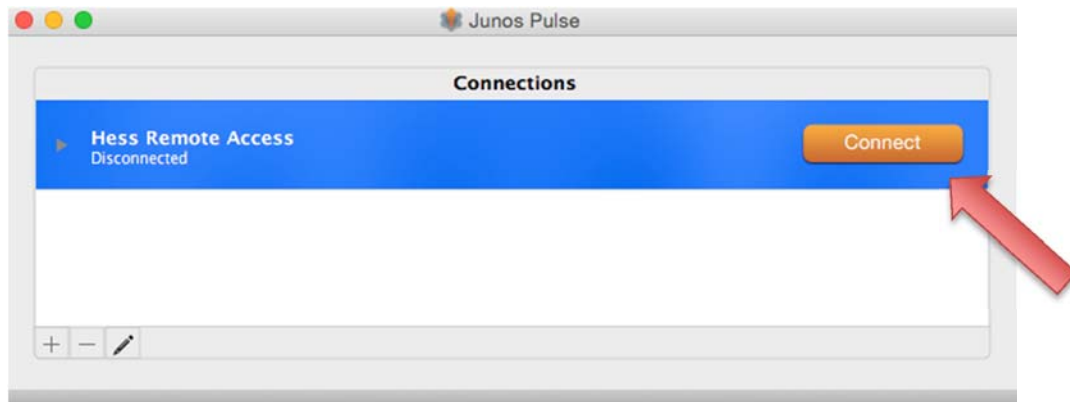

8. Enter in the following information below and click Add.

Type:

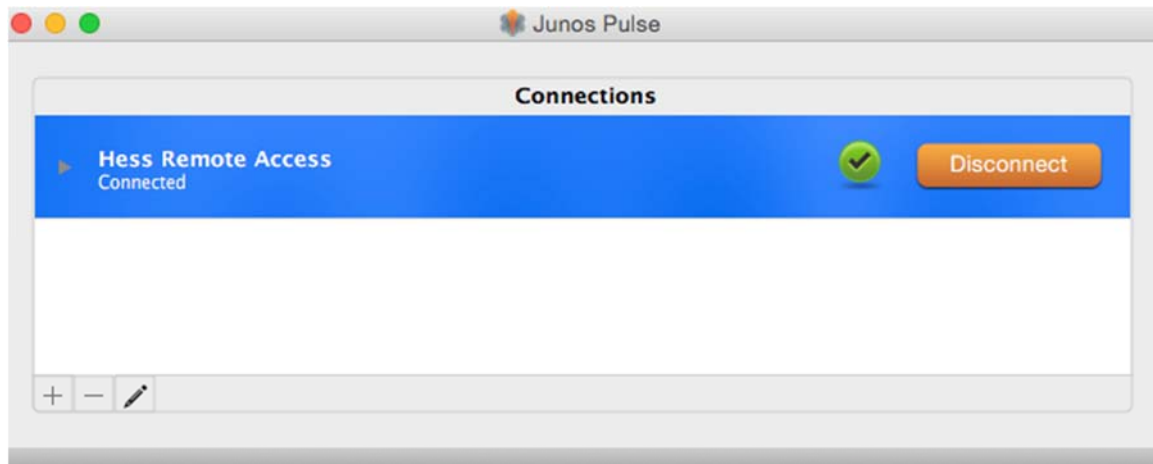

Name:

Server URL:

9. Now you'll see a connection in the list. Click on Connect. You will be prompted to enter in your Hess username and password.

10. Finally, you will see the below and be connected to the Hess VPN.

11. You can go to GlobalApps (<http://globalapps.ihess.com>), HessConnect (<http://hessconnect.ihess.com>) or any other Hess internal Hess resources.
